Functional enrichment of the focused mechanism panel
regulation of programmed cell death
regulation of apoptotic process
programmed cell death
cell death
cellular response to chemical stimulus
negative regulation of programmed cell death
apoptotic process
response to xenobiotic stimulus
Molecular pathway for oxidative stress
mitochondrion
enzyme binding
Lipid and atherosclerosis
Ferroptosis
Longevity regulating pathway
Colorectal cancer
Fluid shear stress and atherosclerosis
Amyotrophic lateral sclerosis ALS
Chromosomal and microsatellite instability in colorectal cancer
Host pathogen interaction of human coronaviruses apoptosis
Non-alcoholic fatty liver disease
AGE-RAGE signaling pathway in diabetic complications
Chemical carcinogenesis - reactive oxygen species
Cellular response to chemical stress
Apoptosis
Photodynamic therapy induced AP 1 survival signaling
Ferroptosis
Oxidative stress response
oxidoreductase activity
protease binding
mitochondrial envelope
Biosynthesis of maresin-like SPMs
Intrinsic Pathway for Apoptosis
cytoplasm
mitochondrial outer membrane
